FOREWORD

This Bylaw draws on New Zealand Standards 9201 series Trade Waste Bylaw. The NZS 9201 series are Model General Bylaws covering various matters under local authority jurisdiction. Local authorities are empowered under the Local Government Act 2002 to make bylaws.

Reference should be made to the Masterton District Council and South Wairarapa District Council Consolidated Bylaw 2012: Part 1 *Introductory* for any other definitions not included in this Part.

1 TITLE

A Bylaw of the Masterton District Council and South Wairarapa District Councils by way of Special Order pursuant to the provisions of the Local Government Act 2002 and all other Acts, powers and authorities enabling it in that behalf to make a Bylaw to be known as the Masterton District Council and South Wairarapa District Council Trade Waste Bylaw 2012.

2 INTRODUCTION AND PURPOSE

This part of the bylaw regulates the discharge of trade waste to a sewerage system operated by a wastewater authority. Section 158 of the Local Government Act 2002 (LGA) requires regular review of all bylaws.

The objectives of the bylaw are to:

- Ensure the protection of public health and safety;
- Prudently manage and operate Council's wastewater plant and infrastructure;
- Ensure compliance with resource consent conditions; and
- Recognise and provide for the traditional and spiritual needs of Maori.

This bylaw provides for the regulation of contributors to the wastewater system through the issue of trade waste consents, which will define,

- (i) Limits on the quality and quantity of a trade waste discharge
- (ii) Monitoring, and
- (iii) Reporting requirements to Council.

2.1 Scope of the Bylaw

2.1.1 *The bylaw provides for the:*

- a) Acceptance of long-term, intermittent, or temporary discharge of trade waste to the sewerage system;
- b) Establishment of three grades of trade waste: Controlled, Conditional and Prohibited;
- c) Evaluation of individual trade waste discharges to be against specified criteria;
- d) Correct storage of materials in order to protect the sewerage system from spillage;

- e) Installation of flow meters, samplers or other devices to measure flow and quality of the trade waste discharge;
- f) Pre-treatment of waste before it is accepted for discharge to the sewerage system;
- g) Sampling and monitoring of trade waste discharges to ensure compliance with the bylaw;
- h) WWA to accept or refuse a trade waste discharge;
- i) Charges to be set to cover the cost of conveying, treating and disposing of, or reusing, trade waste and the associated costs of administration and monitoring;
- j) Administrative mechanisms for the operation of the bylaw; and
- k) Establishment of waste minimisation and management programmes (including sludges) for trade waste producers.

2.1.2 Compliance with other Acts

Nothing in this bylaw shall derogate from any of the provisions of the Health Act, the Health and Safety in Employment Act, the Resource Management Act, the Building Act, the Hazardous Substances and the New Organisms Act and its regulations or any other relevant statutory or regulatory requirements. In the event of any inconsistency between legislation the more stringent requirement applies.

2.1.3 Trade premises and other users to which the bylaw applies.

This bylaw shall apply to all trade premises within the Masterton and South Wairarapa Districts where trade wastes are discharged or sought or likely to be discharged to the sewerage system operated by the WWA or its agents. The bylaw shall also apply to tankered wastes collected for the purpose of discharge to the sewerage systems operated by the WWA or its agents. Pursuant to Section 196 of the Local Government Act 2002 the WWA may refuse to accept any type of trade waste which is not in accordance with this bylaw.

This bylaw does not preclude any agreement with a neighbouring authority for a licensed trade waste agreement.

2.4 General

2.4.1

In this bylaw one gender includes all genders, the singular includes the plural, and the plural includes the singular.

2.4.2

The term “normative” has been used in this bylaw to define the application of the appendix to which it applies. A “normative” appendix is an integral part of a bylaw.

3 COMPLIANCE WITH THE BYLAW

3.1 Control of Discharges

3.1.1

No person shall:

- a) Discharge, or allow to be discharged, any trade waste to the sewerage system except in accordance with the provisions of this bylaw;

- b) Discharge, or allow to be discharged, a prohibited trade waste into the sewerage system;
- c) Add or permit the addition of condensing or cooling water to any trade waste which discharges into the sewerage system unless specific approval is given in a consent; or
- d) Add or permit the addition of stormwater to any trade waste which discharges into the sewerage system unless specific approval is given in a consent.

3.1.2

In the event of failure to comply with Section 3.1.1 a) to d) the WWA may physically prevent discharge to the sewerage system if a reasonable alternative action cannot be established with the discharging party or parties.

3.1.3

Any person discharging to the WWA sewerage system shall also comply with requirements of the Hazardous Substances and New Organisms (HSNO) Act and the RMA.

3.2 Storage, Transport, Handling and Use, Spillage or Management and Control of Hazardous or Harmful Materials

- a) All persons on trade premises and batch dischargers shall take all reasonable steps to prevent the accidental entry of any of the materials listed in Section 3.2 c) of this bylaw from entry into the sewerage system as a result of leakage, spillage or other mishap and shall produce and maintain a spill management plan as part of the Trade Waste Consent Conditions per Appendix D.
- b) No person shall store, transport, handle or use, or cause to be stored, transported, handled or used any hazardous substance as defined by HSNO or any of the materials listed in Section 3.2 c) in a manner that may cause the material to enter the sewerage system and cause harmful effects.
- c) Materials referred to in Section 3.2 a) and b) are those:
 - (i) Products or wastes containing corrosive, toxic, biocidal, radioactive, flammable or explosive materials
 - (ii) Likely to generate toxic, flammable, explosive or corrosive materials in quantities likely to be hazardous, when mixed with the wastewater stream
 - (iii) Likely to be deleterious to the health and safety of the WWA's staff, approved contractors and the public or be harmful to the sewerage system.

4 TRADE WASTE DISCHARGES AND CONSENTS

4.1 Classification of Trade Waste Discharges

4.1.1

Trade Waste discharges shall be classified as one of the following types; either controlled or conditional and each classification shall be subject to the following action:

- a) Controlled Trade Waste – Council shall grant a consent (Controlled Consent) to discharge subject to the general conditions contained in Schedule 1C of this part of the bylaw. It may also contain specific conditions in addition to the general conditions.
- b) Conditional Trade Waste – Council may decide to grant a consent (Conditional Consent) to discharge subject to specific conditions additional to the general conditions. Council reserves the right to decline a conditional consent to discharge.
- c) Prohibited (not consentable)

4.1.2

The WWA is not obliged to accept any trade waste. No application for a trade waste consent shall be approved where the trade waste discharge would contain, or is likely to contain, characteristics which are prohibited. Unless satisfied that the applicant has demonstrated by way of a report prepared pursuant to Section 4.4.1 b)(ii) that the discharge of contaminated wastes will not result in harm to Council's system.

4.1.3

No person shall discharge, or cause to be discharged, any trade waste to the WWA sewer that contains or is likely to contain prohibited characteristics, except in accordance with the provisions of this part of the bylaw.

4.2 Application for a Trade Waste Consent

4.2.1

Every person who does, proposes to, or is likely to:

- a) Discharge into the sewerage system any trade waste (either continuously, intermittently or temporarily); or
- b) Vary the characteristics of a consent to discharge that has previously been granted; or
- c) Vary the conditions of consent to discharge that has previously been granted; or
- d) Significantly change the method or means of pre-treatment for discharge under an existing consent shall if required by the WWA to complete an application in the prescribed form for the consent of the WWA (see Appendix A), to the discharge of that trade waste, or to the proposed variations.

4.2.2

The WWA reserves the right to deal with the owner as well as the occupier of any trade premises.

4.2.3

Where the trade premises produces trade waste from more than one area a separate copy of the "Description of Trade Waste and Premises", (see Appendix B) shall be included in any application for trade waste discharge for each area. This applies whether or not the separate areas are part of a single or separate trade process.

4.2.4

The applicant shall ensure that the application and every other document conveying required information is properly executed and any act done for, or on behalf of, the eventual consent holder (whether for reward or not) in making any such application shall be deemed to be an act of the consent holder.

4.2.5

The WWA may require an application to be supported by an independent report/statement completed by a suitably experienced and external auditor to verify any or all information supplied by the applicant, and this may include a management plan, and/or a “discharge management plan”.

4.2.6

Every application shall be accompanied by a trade waste application fee in accordance with the WWA’s schedule of rates and charges.

4.3 Processing of an Application

The WWA shall acknowledge the application in writing within 10 working days of the receipt of the application.

4.4 Information and Analysis**4.4.1**

On the receipt of any application for a trade waste consent to discharge from any premises or to alter an existing discharge, the WWA may:

- (a) Require the applicant to submit any additional information which it considers necessary to reach an informed decision;
- (b) Require the applicant to submit either:
 - (i) A management plan to the satisfaction of the WWA; or
 - (ii) A wastewater system impact investigation report, at the applicant’s cost, on the effects of any trade discharges specified characteristics, and more particularly prohibited trade wastes on the wastewater system’s operation, treatment process biosolids, and the quality of the dewatered and/or composted biosolids, subject to the following:
 - An independent qualified person, as approved by Council, shall carry out the investigation and produce the report;
 - The scope of the investigation shall establish:
 - The existing background level of the specified characteristics already contained in the influent into the treatment plant, and in the process treatment biosolids and in the dewatered and composted biosolids;
 - The impact and effect of receiving the specified characteristics on the background levels and the effect of this potential discharge on the function of the treatment plant and the quality of the composted biosolids;
 - The impact and effect of receiving the applicant’s trade waste discharge on the ability of future applicants to discharge to the sewer.

- (iii) Require the applicant to submit any additional information, at the applicant's cost, which it considers necessary to reach an informed decision;
 - (iv) Have the discharge investigated and analysed, at the applicant's cost, as provided for in this bylaw.
- (c) Whenever appropriate have the discharge investigated and analysed as provided for in Sections 6.1 and 6.3 of this bylaw.

4.4.2

The WWA shall notify the applicant of any requirement under this section within 10 working days of receipt of the application.

4.5 Consideration of an Application

Within 15 working days (or extended as necessary by the WWA) of receipt of an application complying with this bylaw and/or all requirements under Section 4.4 whichever is the later, the WWA shall, after considering the matters in Section 4.6 action one of the following in writing:

- a) Grant the application as a controlled trade waste consent and inform the applicant of the decision by issuing the appropriate notice;
- b) Grant the application as a conditional trade waste discharge consent and inform the applicant of the decision and the conditions imposed on the discharge by issuing the appropriate notice of consent to the discharge; or
- c) Decline the application and notify the applicant of the decision giving a statement of the reasons for refusal.

Notwithstanding Section 4.5 a) of this part of the bylaw, Council reserves the right to make the final decision on what conditions shall be imposed.

4.6 Consideration Criteria

In considering any application for a trade waste consent to discharge from any trade premises or tankered waste into the sewerage system and in imposing any conditions on such a consent, the WWA shall take into consideration the quality, volume, and rate of discharge of the trade waste from such premises or tanker in relation to:

- a) The health and safety of WWA staff, Council's officers and the public;
- b) The limits and/or maximum values for characteristics of trade waste as specified in Schedule 1C of this bylaw;
- c) The extent to which the trade waste may react with other trade waste or foul water to produce an undesirable effect, e.g. settlement of solids, production of odours, accelerated corrosion and deterioration of the sewerage system etc.;
- d) The flows and velocities in the sewer, or sewers and the material or construction of the sewer or sewers;
- e) The capacity of the sewer or sewers and the capacity of any sewage treatment works, and other facilities;
- f) The nature of any sewage treatment process and the degree to which the trade waste is capable of being treated in the sewage treatment works;
- g) The timing and balancing of flows into the sewerage system;

- h) Any statutory requirements relating to the discharge of raw or treated wastewater to receiving waters, the disposal of sewage sludges, beneficial use of biosolids, and any discharge to air, (including the necessity for compliance with any resource consent, discharge permit or water classification);
- i) The effect of the trade waste discharge on the ultimate receiving environment;
- j) The conditions on resource consents for the sewerage system and the residuals from it;
- k) The possibility of unscheduled, unexpected or accidental events and the degree of risk these could cause to humans, the sewerage system and the environment;
- l) Consideration for other existing or future discharges;
- m) Amenability of the trade waste to pre-treatment;
- n) Existing pre-treatment works on the premises and the potential for their future use;
- o) Cleaner production techniques and waste minimisation practices;
- p) Requirements and limitations related to sewage sludge disposal and reuse;
- q) Control of stormwater;
- r) Management plan; and
- s) Tankered waste being discharged at an approved location/s.

4.7 Conditions of Trade Waste Consent

Any trade waste consent to discharge may be granted subject to such conditions that the WWA may impose, including but not limited to:

- a) The particular public sewer or sewers to which the discharge will be made;
- b) The maximum daily volume of the discharge and the maximum rate of discharge, and the duration of maximum discharge;
- c) The maximum limit or permissible range of any specified characteristics of the discharge, including concentrations and/or mass limits determined in accordance with Section 4;
- d) The period or periods of the day during which the discharge, or a particular concentration, or volume of discharge may be made;
- e) The degree of acidity, or alkalinity of the discharge at the time of discharge;
- f) The temperature of the trade waste at the time of discharge;
- g) The provision by, or for the consent holder, at the consent holder's expense, of screens, grease traps, silt traps or other pre-treatment works to control trade waste discharge characteristics to the consented levels of solids or grease; and
- h) The provision and maintenance by the consent holder, at the consent holder's expense, of partial or preliminary treatment processes, equipment or storage facilities, to regulate the quality, quantity and rate of discharge or other characteristics prior to the point of discharge.
- i) The provision and maintenance at the consent holder's expense of inspection chambers, manholes or other apparatus or devices to provide reasonable access to drains for sampling and inspection;

- j) The provision and maintenance of a sampling, analysis and testing programme and flow measurement requirements, at the consent holder's expense;
- k) The method or methods to be used for the measuring flow rates and/or volume and taking samples of the discharge for use in determining the amount of any trade waste charges applicable to that discharge;
- l) The provision and maintenance by, and at the expense of, the consent holder of such meters or devices as may be required to measure the volume, strength, discharge characteristics, or flow rate of any trade waste being discharged from the premises, and for the testing of such meters;
- m) The provision and maintenance, at the consent holder's expense of such services, (whether electricity, water or compressed air or otherwise), which may be required, in order to operate meters and similar devices;
- n) At times specified, the provision in a WWA approved format by the consent holder to the WWA of all flow and/or volume records and results of analyses (including pre-treatment by-products e.g. sewage sludge disposal);
- o) The provision and implementation of a management plan; "Cleaner Production Programme" to reduce and improve the trade waste quality or quantity; and
- p) Risk assessment of damage to the environment due to an accidental discharge of a chemical;
- q) Waste minimisation and management;
- r) Cleaner production techniques;
- s) Remote control of discharges;
- t) Third party treatment, carriage, discharge or disposal of by-products of pre-treatment of trade waste (including sewage sludge disposal);
- u) Requirement to provide a bond or insurance in favour of the WWA where failure to comply with the consent could result in damage to the WWA's sewerage system, its treatment plants, or could result in the WWA being in breach of any statutory obligation; and
- v) Remote monitoring of discharges.
- w) Treatment and disposal charges as described in Section 7.3.1a)(ii) of this bylaw.

4.8 Duration

4.8.1 Controlled Discharges

Consents for controlled discharges shall be renewed annually and may remain in force indefinitely or until either:

- a) Cancellation under Section 3.1.2 or Section 3.10;
- b) The quantity and nature of the discharge changes significantly. For a temporary discharge see Appendix C;
- c) If in the opinion of the WWA the discharge changes or is likely to change to such an extent that it becomes a conditional or prohibited trade waste;
- d) The WWA changes the trade waste management procedures by implementation of changed trade waste bylaw conditions or any amendment to, or replacement of, its trade waste bylaw; or
- e) The conditions on resource consents for the sewerage system and the residuals from it change.

In all cases, after appropriate consultation, the person shall apply within 10 working days of this change occurring for a conditional consent, in accordance with Section 4.2 of this bylaw. This application shall be approved prior to the occurrence of any new discharge.

4.8.2 Conditional Consents

Subject to Sections 4.10 and 7.1 conditional consents under this bylaw may remain in force indefinitely subject to the following:

- a) Conditional consents shall be renewed annually and be granted to a consent holder who at the time of application satisfies the WWA that:
 - (i) The nature of the trade activity, or the process design and/or management of the premises are such that the consent holder has a demonstrated ability to meet the conditions of the consent during its term; and/or
 - (ii) Cleaner production techniques are successfully being utilised, or that a responsible investment in cleaner production equipment or techniques is being made; and/or
 - (iii) Significant investment in pre-treatment facilities has been made, such that a longer period of certainty for the amortising of this investment is considered reasonable; and/or
 - (iv) The reissuing of a consent can not be unreasonably withheld.

Notwithstanding the above the WWA retains the right to review the conditions at any time. The reasons for such an earlier review could include:

- (A) The level of consent holder compliance, including any accidents including spills or process mishaps.
 - (B) Matters pertaining to the WWA's resource consents for the sewerage system.
 - (C) Matters pertaining to the WWA's environmental policies and outcomes.
 - (D) New control and treatment technologies and processes.
 - (E) Any of the matters outlined in Section 4.
 - (F) Matters pertaining to the WWA's legal obligations.
- b) In all cases where either the consent holder or the owner of the premises changes, or there is a change of use, a new application for a conditional trade waste consent shall be made. It shall be the responsibility of the consent holder to lodge the new application; and
 - c) The conditions on resource consents for the sewerage system and the residuals from it change.

4.9 Technical Review and Variation

4.9.1

The WWA at any time may require a person undertaking a controlled discharge to apply for a consent in accordance with Section 4.8.1.

4.9.2

The WWA may at any time during the term of a trade waste consent, by written notice to the consent holder (following a reasonable period of consultation), vary any condition to such an extent as the WWA considers necessary following a review of the technical issues considered when setting conditions of consent. This is due to new information becoming available or to meet any new resource consent imposed on the discharge from the WWA's treatment plant, or with any other legal requirements imposed on the WWA.

4.9.3

A consent holder may at any time during the term of a consent, by written application to the WWA, seek to vary any condition of consent, as provided for in Section 4.7 of this bylaw.

4.10 Cancellation of the Right to Discharge**4.10.1 Suspension or Cancellation on Notice**

The WWA may suspend or cancel any consent or right to discharge at any time following 20 working days' (during which consultation has occurred) notice to the consent holder or person discharging any trade waste:

- a) For the failure to comply with any condition of the consent;
- b) For the failure to maintain effective control over the discharge;
- c) For the failure to limit in accordance with the requirements of a consent the volume, nature, or composition of trade waste being discharged;
- d) In the event of any negligence which, in the opinion of the WWA, threatens the safety of, or threatens to cause damage to any part of the sewer system or the treatment plant or threatens the health or safety of any person;
- e) If any occurrence happens that, in the opinion of the WWA, poses a serious threat to the environment;
- f) In the event of any breach of a resource consent held by the council issued under the Resource Management Act 1991;
- g) Failure to provide and when appropriate update a management plan as required for a conditional consent;
- h) Failure to follow the management plan provisions at the time of an unexpected, unscheduled or accidental occurrence;
- i) Failure to pay any charges rates or fees for wastewater services under this bylaw; or
- j) If any other circumstances arise which, in the opinion of the WWA, render it necessary in the public interest to cancel the right to discharge.

If any process changes require more than 20 working days, reasonable time may be given to comply with the consent conditions.

4.10.2 Summary Cancellation

Further to Section 4.10.1 any trade waste consent or discharge may at any time be summarily cancelled by the WWA on giving to the consent holder or person discharging written notice of summary cancellation if:

- a) They discharge any prohibited substance;
- b) The WWA is lawfully directed to withdraw or otherwise to terminate the consent summarily;
- c) They discharge any trade waste unlawfully;

- d) The continuance of discharge is, in the opinion of the WWA, a threat to the environment or public health; -
- e) The continuance of discharge may, in the opinion of the WWA, result in a breach of a resource consent held by the WWA; or
- f) In the opinion of the WWA the continuance of the discharge puts at risk the ability of the WWA to comply with conditions of a resource consent and/or requires identified additional treatment measures or costs to seek to avoid a breach of any such resource consent.

5 TRADE WASTE APPROVAL CRITERIA

5.1 Pre-treatment

The WWA may approve a trade waste discharge (see Appendix D for appropriate form) subject to the provision of appropriate pre-treatment systems to enable the person discharging to comply with the bylaw. Such pre-treatment systems shall be provided, operated and maintained by the person discharging at their expense.

Refuse or garbage grinders, and macerators shall not be used to dispose of solid waste from trade premises to the sewerage system unless approved by the WWA.

The person discharging shall not, unless approved by the WWA, add or permit the addition of any potable, condensing, cooling water or stormwater to any trade waste stream in order to vary the level of any characteristics of the waste.

NOTE – Condensing and cooling water should not be discharged as of right to a stormwater drain or natural waterway without the consent of the appropriate authority.

5.2 Mass Limits

A conditional trade waste consent to discharge may impose controls on a trade waste discharge by specifying mass limits for any characteristic.

Mass limits may be imposed for any characteristic. Any characteristic permitted by mass limit shall also have its maximum concentration limited to the value scheduled unless approved otherwise.

When setting mass limit allocations for a particular characteristic the WWA shall consider:

- a) The operational requirements of and risk to the sewerage system, and risks to occupational health and safety, public health, and the ultimate receiving environment;
- b) Whether or not the levels proposed pose a threat to the planned or actual beneficial reuse of biosolids or sewage sludge;
- c) Conditions in the sewerage system near the trade waste discharge point and elsewhere in the sewerage system;
- d) The extent to which the available industrial capacity was used in the last financial period and is expected to be used in the forthcoming period;
- e) Whether or not the applicant uses cleaner production techniques within a period satisfactory to the WWA;

- f) Whether or not there is any net benefit to be gained by the increase of one characteristic concurrently with the decrease of another to justify any increased application for industrial capacity;
- g) Any requirements of the WWA to reduce the pollutant discharge of the sewerage system;
- h) How great a proportion the mass flow of a characteristic of the discharge will be of the total mass flow of that characteristic in the sewerage system;
- i) The total mass of the characteristic allowable in the sewerage system, and the proportion (if any) to be reserved for future allocations; and
- j) Whether or not there is an interaction with other characteristics which increases or decreases the effect of either characteristic on the sewer reticulation, treatment process, or receiving water (or land).

6 SAMPLING, TESTING AND MONITORING

6.1 Flow Metering

6.1.1

Flow metering may be required by the WWA:

- a) On conditional discharges when there is not a reasonable relationship between a metered water supply to the premises, and the discharge of trade waste;
- b) When the WWA will not approve a method of flow estimation; or
- c) When the discharge represents a significant proportion of the total flow/load received by the WWA.

6.1.2

The consent holder shall be responsible for the supply, installation, reading and maintenance of any meter required by the WWA for the measurement of the rate or quantity of discharge of trade waste. These devices shall be subject to the approval of the WWA, but shall remain the property of the consent holder.

6.1.3

Records of flow and/or volume shall be available for viewing at any time by the WWA, and shall be submitted to the WWA at prescribed intervals by the consent holder in a format approved by the WWA.

6.1.4

Meters shall be located in a position approved by the WWA which provides the required degree of accuracy and should be readily accessible for reading and maintenance. The meters shall be located in the correct position according to the manufacturer's installation instructions.

6.1.5

The consent holder shall arrange for in situ calibration of the flow metering equipment and instrumentation by a person and method approved by the WWA upon installation and at least once a year thereafter to ensure its performance. The meter accuracy should be $\pm 10\%$ but with no greater a deviation from the previous meter calibration of $\pm 5\%$. A copy of independent certification of each calibration result shall be submitted to the WWA.

6.1.6

Should any meter, after being calibrated, be found to have an error greater than that specified in Section 6.1.5 as a repeatable measurement, the WWA may make an adjustment in accordance with the results shown by such tests back-dated for a period at the discretion of the WWA but not exceeding 12 months, and the consent holder shall pay or be credited a greater or lesser amount according to such adjustment.

6.2 Estimating Discharge

6.2.1

Where no meter or similar apparatus is warranted, the WWA may require that a percentage of the water supplied to the premises (or other such basis as seems reasonable) be used for estimating the rate or quantity of flow for the purposes of charging.

6.2.2

Should any meter be out of repair or cease to register, or be removed, the WWA shall estimate the discharge for the period since the previous reading of such meter, (based on the average of the previous 12 months [four billing periods] charged to the person discharging) and they shall pay according to such estimate. Provided that when by reason of a large variation of discharge due to seasonal or other causes, the average of the previous 12 months (four billing periods) would be an unreasonable estimate of the discharge, then the WWA may take into consideration other evidence for the purpose of arriving at a reasonable estimate, and the person discharging shall pay according to such an estimate.

6.2.3

Where in the opinion of the WWA, a meter has been tampered with, the WWA (without prejudice to the other remedies available) may declare the reading void and estimate discharge as provided above.

6.3 Sampling, Analysis and Monitoring

6.3.1

As determined by the WWA sampling, testing and monitoring may be undertaken to determine if:

- a) A discharge complies with the provisions of this bylaw;
- b) A discharge is to be classified as a controlled, conditional, or prohibited, refer to Section 4.1;
- c) A discharge complies with the provisions of Schedule 1C for controlled discharge and any consent to discharge; and
- d) Trade waste consent charges are applicable to that discharge.

6.3.2

The taking, preservation, transportation and analysis of the sample shall be undertaken by an authorised officer or agent of the WWA, or the person discharging in accordance with accepted industry standard methods, or by a method specifically approved by the WWA. The person discharging shall be responsible for all reasonable costs. Where a dispute arises as to the validity of the methods or

procedures used for sampling or analysis, the dispute may be submitted to a mutually agreed independent arbitrator.

6.3.3

All authorised officers or authorised agents of the WWA, or any analyst may enter any premises believed to be discharging trade waste at any time in order to determine any characteristics of any actual or potential discharge by:

- a) Taking readings and measurements;
- b) Carrying out an inspection; and/or
- c) Taking samples for testing,

of any solid, liquid, or gaseous material or any combination or mixture of such materials being discharged.

Authorisation for entry to premises is given under the LGA and entry shall be in compliance with the health and safety policies of that particular site.

6.4 Monitoring

6.4.1 Monitoring for Compliance

The WWA is entitled to monitor and audit any trade waste discharge for compliance. Whether for a controlled discharge or a conditional consent discharge monitoring may be carried out as follows:

- a) The WWA or its authorised agent will take the sample and arrange for this sample to be analysed in an approved laboratory by agreed/approved analytical methods;
- b) The sampling procedure will be appropriate to the trade waste and the analysis;
- c) The WWA will audit the sampling and analysis carried out by a self-monitoring trade waste discharger. Analysis will be performed by an approved laboratory. Inter-laboratory checks are to be part of this process;
- d) The WWA will audit the sampling and analysis carried out by an analyst. Analysis will be performed by an approved laboratory. Inter-laboratory checks are to be part of this process; and
- e) The WWA will audit the trade waste consent conditions including any management plans.

At the discretion of the WWA all costs of monitoring shall be met by the discharger either through direct payment to the laboratory or to the WWA.

6.4.2 Sampling Methodology

Normally a single grab or composite sample is sufficient. If required the grab or composite sample can be split equally into three as follows:

- a) One portion of the sample goes to the trade waste discharger for appropriate analysis and/or storage;
- b) A second portion of the sample shall be analysed at a laboratory approved by the WWA;
- c) A third portion of the sample is retained by the WWA for 20 working days, for additional analysis if required.

Due consideration will be applied to any changes that could occur in retained trade waste samples and provisions to mitigate against changes will be adopted where practicable.

In all cases the samples shall be handled in an appropriate manner such that the characteristics being tested for are, as far as reasonably possible, preserved.

All samples shall be preserved, handled, transported and delivered to an approved laboratory according to best possible practice and approved standards.

6.4.3 Tankered Wastes

Tankered wastes shall not be discharged into the WWA's sewerage system by any person or consent holder not compliant with the Liquid and Hazardous Wastes Code of Practice. The WWA may accept tankered wastes for discharge at an approved location. Tankered wastes shall:

- a) Be transported by a consent holder to discharge domestic septic tank or industrial wastes;
- b) Have material safety data sheets (MSDS) supplied to the WWA detailing the contents of a waste;
- c) Be tested to determine their character if the contents of the waste are not known. Specialist advice on pre-treatment or acceptance may be required. The cost of all testing and advice shall be borne by the consent holder;
- d) Not be picked up and transported to the disposal site until appropriate arrangements and method for disposal have been determined by the WWA;
- e) To prevent cross-contamination between tanker loads, the tanker shall be thoroughly washed prior to collecting a load for disposal into the sewerage system; and
- f) Have 24 hours notice given for the disposal of wastes other than those sourced from domestic septic tanks.

Any person illegally disposing of, or causing to be disposed, tankered waste either by incorrect disclosure of contents (characteristics and/or amount) or dumping into the WWA's sewerage system other than the prescribed location will be in breach of the bylaw.

6.4.4 Disinfected/Super Chlorinated Water

Any water used during the repair and construction of water mains shall be de-chlorinated prior to the discharge into the sewerage system. An application for a temporary discharge consent shall be made. Such water shall not be disposed of to storm-water or adjacent water courses without appropriate approvals.

7 BYLAW ADMINISTRATION

7.1 Review of Decisions

If any person is dissatisfied with any decision by an authorised officer of Council made under this bylaw, that person may, by notice delivered to the Chief Executive Officer of the WWA not later than 20 working days after the decision by the authorised officer is served upon that person, request the Chief Executive Officer to review any such decision and such a decision shall be final.

Nothing in this section shall affect any right of appeal under the LGA.

7.2 Accidents and Non-compliance

The person discharging shall inform the WWA immediately on discovery of any, accident including spills or process mishaps which may cause a breach of this bylaw.

In the event of any accident occurring when the person holds a conditional consent, then the WWA may review the consent under Section 4.9 or may require the consent holder, within 20 working days of the date such requirement is notified to the consent holder in writing, to review the contingency management procedures and re-submit for approval the management plan with the WWA.

In the event of an accident occurring on the premises of a controlled discharge, the WWA may require the person discharging to apply for a conditional consent.

7.3 Charges and Payments

7.3.1 Charges

The WWA may recover fees and charges as follows:

- a) The consent holder shall be liable to pay for the discharge of trade wastes in accordance with:
 - (i) For conveyance, treatment and disposal – the Revenue Policy of the Council’s Long Term Council Community Plan and the Annual Plan.
 - (ii) For administration and management – in accordance with Section 6.3.1b).
- b) The amount of trade waste charges payable in respect of administration and management of a particular trade waste discharge shall be calculated for:
 - (i) Administration
 - (ii) Compliance monitoring
 - (iii) Inspection of premises
 - (iv) Non compliance re-inspection

These sums shall be levied in accordance with the Revenue Policy of the Council’s Long Term Council Community Plan and the Annual Plan.

7.3.2 Invoicing

All charges determined in accordance with Section 6.3.1a) of this part of the bylaw shall be invoiced as follows:

- a) Conditional consent holders – 12 monthly or as otherwise required. The occupier shall pay this invoice by the 20th day of the next month.
- b) Other consent holders – 12 monthly or as otherwise required. The occupier shall pay this invoice by the 20th day of the next month.

The invoice may provide each person discharging with a copy of the information and calculations used to determine the extent of any charges and fees due, in regard to a discharge.

7.3.3 Cease to Discharge

The person discharging shall be deemed to be continuing the discharge of trade waste and shall be liable for all charges, until notice of disconnection is given in accordance with Section 7.5.3 of this part of the bylaw.

7.3.4 Failure to Pay

All fees and charges payable under this bylaw shall be recoverable as a debt and failing recovery such monies shall become a charge on the trade premises to which the charges or rates relate. If the person discharging fails to pay any fees and charges under this bylaw the WWA may cancel the right to discharge in accordance with Section 4.10.

7.3.5 Recovery of Costs

The WWA may recover costs under the LGA relating to Section 150 and Section 151, wilful damage or negligent behaviour (Section 175) and remedying damage arising from breach of bylaw (Section 176).

Council may at the expense of the occupier of trade waste premises repair, remedy and make good any damage or blockage to a sewer or drain or the sewerage system cause by or arising out of or resulting from wilful or negligent conduct of the occupier, which:

- a) Fails to comply with or contravenes any provision of this part of the bylaw;
- b) Breaches the conditions of any consent to discharge granted pursuant to this part of the bylaw; or
- c) Fails to comply with a notice served under this part of the bylaw.

7.4 Authorised Officers

All authorised officers of the WWA, or other persons authorised under Section 174 or Section 177 or paragraph 32 of Schedule 7 of the LGA, shall possess and produce on request warrants of authority and evidence of identity. Any authorised officers may at any reasonable time enter any premises believed to be discharging trade wastes to determine any characteristic of any discharge by:

- a) Taking readings and measurements; or
- b) Taking samples or any solids, liquids or gaseous material or any combination or mixtures of such materials being discharged; or
- c) Observing accidental occurrences and clean-up.

The extent and level of delegation to authorised officers will be in accordance with the Council's register of statutory delegations and warrants.

Authorisation for entry to premises is given under the LGA and entry shall be in compliance with the health and safety policies of that particular site.

7.5 Transfer or Termination of Rights and Responsibilities

7.5.1

A trade waste consent to discharge shall be issued in the name of the given consent holder. The consent holder shall not, unless written approval is obtained from the WWA:

- a) Transfer to any other party the rights and responsibilities provided for under this bylaw, and under the consent;
- b) Allow a point of discharge to serve another premises, or the private drain to that point to extend by pipe or any other means to serve another premises; or
- c) In particular and not in limitation of the above, allow sewage from any other party to be discharged at their point of discharge.

7.5.2

Renewal of a trade waste consent on change of ownership of premises shall not be unreasonably withheld if the characteristics of the sewage remain unchanged.

7.5.3

The person discharging shall give 48 hours notice in writing to the WWA of their requirement for disconnection of the discharge connection and/or termination of the discharge consent, except where demolition or relaying of the discharge drain is required, in which case the notice shall be within seven working days. The person discharging shall notify the WWA of the new address details for final invoicing.

On permanent disconnection and/or termination the person discharging may at the WWA's discretion be liable for trade waste charges to the end of the current charging period.

7.5.4

When a person discharging ceases to occupy premises from which trade wastes are discharged into the sewerage system any consent granted shall terminate but without relieving the person discharging from any obligations existing at the date of termination.

7.6 Service of Documents

7.6.1 Delivery or Post

Any notice or other document required to be given, served or delivered under this bylaw to a person discharging may (in addition to any other method permitted by law) be given or served or delivered by being:

- a) Sent by pre-paid ordinary mail, courier, or facsimile, or email to the person discharging at the person discharging's last known place of residence or business;
- b) Sent by pre-paid ordinary mail, courier, or facsimile, or email to the person discharging at any address for service specified in a trade waste consent to discharge;
- c) Where the person discharging is a body corporate, sent by pre-paid ordinary mail, courier, or facsimile, or email to, or left at its registered office; or
- d) Personally served on the person discharging.

7.6.2 Service

If any notice or other document is:

- a) Sent by post it will be deemed received on the first day (excluding weekends and public holidays) after posting;
- b) Sent by facsimile or email and the sender's facsimile machine or email produces a transmission report indicating that the facsimile or email was

- sent to the addressee, the report will be prima facie evidence that the facsimile or email was received by the addressee in a legible form at the time indicated on that report; or
- c) Sent by courier and the courier obtains a receipt or records delivery on a courier run sheet, the receipt or record of delivery on a courier run sheet will be prima facie evidence that the communication was received by the addressee at the time indicated on the receipt or courier run sheet, or left at a conspicuous place at the trade premises or is handed to a designated person(s) nominated by the consent holder then that shall be deemed to be service on, or delivery to the consent holder at that time.

NOTE – It should be verified that notice has been served on the correct person.

7.6.3 Signature

Any notice or document to be given, served or delivered shall be signed by an authorised officer.

7.7 Offences

Every person or consent holder or owner or occupier of trade premises who:

- a) Fails to comply with or acts in contravention of any provision of this bylaw;
- b) Breaches the conditions of any consent to discharge granted pursuant to this bylaw; or
- c) Fails to comply with a notice served under this bylaw,

Commits an offence under Section 239 of the LGA, and is liable to a fine as specified in Section 242 of the LGA, or the issue of an infringement notice under Section 245 of the LGA.

In all cases the WWA may recover costs associated with damage to the WWA sewerage system and/or breach of this bylaw in accordance with Section 175 and Section 176 of the LGA respectively.

7.8 Transitional Provisions

7.8.1 Applications

Any application for a consent to discharge trade waste made under the Trade Waste 2008 Bylaw for which a consent has not been granted at the time of this new bylaw coming into force shall be deemed to be an application made under Section 4.2 of this bylaw.

7.8.2 Existing Trade Waste Consents

Every existing trade waste consent shall continue in force as if it were a consent under this bylaw until it reaches its expiry date provided that no consent shall run beyond 30th June for the year the certificate has been issued.

SCHEDULE 1A

Summary of Discharge Characteristics

- 1) The following general conditions are summarised from the Masterton and South Wairarapa District Council Consolidated Bylaw 2013 Part 12 Trade Waste (2010) for your convenience but are not complete and do not replace the Bylaw in any way.
- 2) This consent is personal to the occupier and is not transferable without written approval.
- 3) If the quantity of wastewater or the point of discharge is to be changed from that requested by the occupier and approved in this consent, the occupier must apply for a variation to this consent.
- 4) A consent can be cancelled if the occupier fails to comply with any condition of the consent, or fails to maintain effective control over the discharge.
- 5) Records of flow and/or volume shall be available for viewing at any time by the Council.
- 6) No trade waste shall be acceptable if it contains any matter or substances which are prohibited in Schedule 1D of the Trade Waste Bylaw.
- 7) Temperature – must not exceed 40°C unless a higher temperature is approved in Schedule 1B.
- 8) pH – must be between 6.0 and 10.0 at all times unless a variation is approved in Schedule 1B.
- 9) Solids which may block sewers or pumps are prohibited. These include dry solids, non-faecal solids in excess of 15mm, heavy solids which settle faster than 50mm/minute, fibrous material, sheet films, and anything which may react to form a solid mass or interfere with the free flow of wastewater in the drainage system.
- 10) Solvents, fuels and organic fluids including oil, fat and grease must not be present as a free layer (whether floating or settled).
- 11) Dissolved or emulsified solvents, fuel and organic liquids are prohibited unless authorised in Schedule 1B.
- 12) Emulsified oils must not exceed 500g/m³ and the emulsion must be stable.
- 13) Sulphides must not exceed 5g/m³ (as H₂S on acidification) unless authorised in Schedule 1B.
- 14) Oxidised sulphur compounds must not exceed 500g/m³ (as sulphate) unless authorised in Schedule 1B.
- 15) Toxic pollutants – heavy metals are prohibited unless authorised in Schedule 1B.
- 16) Toxic pollutants – organic compounds and pesticides are prohibited unless authorised in Schedule 1B.
- 17) Stormwater and condensing or cooling waters are prohibited unless specified in Schedule 1B.
- 18) Unless specified within this consent, all premises that discharge process waste to the sewer shall have an appropriately sized interceptor that complies with the provisions of the Building Code.
- 19) The consent holder shall ensure that the oils/solids trap is cleaned and maintained at an interval that is appropriate to comply with the Trade Waste Bylaw. No trade waste monitoring is required unless spot-checks or inspections reveal inadequate maintenance. Records of trap cleaning and maintenance to be retained on the premises for inspection by the Trade Waste Officer.
- 20) The Trade Waste Officer may inspect the wastewater treatment facility at any reasonable time and may require a sample to be taken for analysis if, in the opinion of the Trade Waste Officer, the discharge from the facility does not comply with the Trade Waste Bylaw. Any trade waste monitoring will be at the expense of the occupier. Any non-compliance with the Trade Waste Bylaw may result in the consent being changed to a higher risk category and there may be an increase in consent fees and associated monitoring costs.
- 21) The consent holder is required to ensure that where hazardous substances are stored, handled or used, or where hazardous processes are undertaken, construction shall be designed to protect people and other property, under both normal and reasonably foreseeable abnormal conditions, and shall be provided with the means of preventing hazardous substances or other materials unacceptable to the network utility operator, from entering the sewers or public drains.

SCHEDULE 1B

Specific Conditions

CONDITIONS SPECIFIC TO TRADE WASTE CONSENT NUMBER TO DISCHARGE CONTROLLED OR CONDITIONAL TRADE WASTE TO THE COUNCIL WASTEWATER DRAINAGE SYSTEM

1. Point of discharge

This consent is for trade waste to enter the public sewer.

2. Flow

(a) Less than m³ shall be discharged in any 24 hour period.

(b) The instantaneous flow rate of the discharge shall not exceed L/s at any time.

3. Temperature

The temperature shall not exceed °C.

4. Discharge characteristics

Limits specific to this consent are:

.....
.....

5. Pre-treatment

The occupier shall provide the following pre-treatment works:

.....
.....

6. Monitoring

The following trade waste monitoring programme shall be implemented by the occupier:

.....

7. Charges

The occupier shall pay the required annual fee.

SCHEDULE 1C

CONTROLLED DISCHARGE CHARACTERISTICS

1C.1 Introduction

1C.1.1

The nature and levels of the characteristics of any trade waste discharged to the WWA system shall comply at all times with the following requirements, except where the nature and levels of such characteristics are varied by the WWA as part of an approval to discharge a trade waste.

NOTE – It is very important to refer to the guideline tables for background reasons for contaminant concentrations.

1C.1.2

The WWA shall take into consideration the combined effects of trade waste discharges and may make any modifications to the following acceptable characteristics for individual discharges the WWA believes are appropriate.

1C.1.3

An additional column in Schedule 1G for mass limits may be added as required.

1C.1.4

The nature and levels of any characteristic may be varied to meet any new resource consents or other legal requirements imposed on the WWA, refer to Section 3.9 of the bylaw.

1C.2 Physical Characteristics

1C.2.1 Flow

- a) The 24 hour flow volume shall be less than 5m³.
- b) The maximum instantaneous flow rate shall be less than 2.0L/s.

1C.2.2 Temperature

The temperature shall not exceed 40°C.

1C.2.3 Solids

- a) Non-faecal gross solids shall have a maximum dimension which shall not exceed 15mm, and gross solids shall have an acquiescent settling velocity, which shall not exceed 50mm/minute.
- b) The suspended solids content of any trade waste shall have a maximum concentration which shall not exceed 2000g/m³. For significant industry this may be reduced to 600g/m³ or such other concentration as may be determined.
- c) The settleable solids content of any trade waste shall not exceed 50mL/L.
- d) The total dissolved solids concentration in any trade waste shall be subject to the approval of the WWA having regard to the volume of the waste to be discharged, and the suitability of the drainage system and the treatment plant to accept such waste.
- e) Fibrous, woven, or sheet film or any other materials which may adversely interfere with the free flow of sewage in the drainage system or treatment plant shall not be present.

1C.2.4 Oil and Grease

- a) There shall be no free or floating layer.
- b) A trade waste with mineral oil, fat or grease unavoidably emulsified, which in the opinion of the WWA is not biodegradable shall not exceed 200g/m³ as petroleum ether extractable matter when the emulsion is stable at a temperature of 15°C and

when the emulsion is in contact with and diluted by a factor of 10 by raw sewage, throughout the range of pH 6.0 to pH 10.0.

- c) A trade waste with oil, fat or grease unavoidably emulsified, which in the opinion of the WWA is biodegradable shall not exceed 500g/m³ when the emulsion is stable at a temperature of 15°C and when the emulsion is in contact with and diluted by a factor of 10 by raw sewage throughout the range of pH 4.5 to pH 10.0.
- d) Emulsified oil, fat or grease shall not exceed 100g/m³ as petroleum ether extractable matter when the emulsion is unstable at a temperature of 15°C and when the emulsion is in contact with and diluted by a factor of 10 by raw sewage throughout the range of pH 4.5 to pH 10.0.

1C.2.5 Solvents and Other Organic Liquids

There shall be no free layer (whether floating or settled) of solvents or organic liquids.

1C.2.6 Emulsions of Paint, Latex, Adhesive, Rubber, Plastic

- a) Where such emulsions are not treatable these may be discharged into the sewer subject to the total suspended solids not exceeding 1000g/m³ or the concentration agreed with the WWA.
- b) The WWA may determine that the need exists for pre-treatment of such emulsions if they consider that trade waste containing emulsions unreasonably interferes with the operation of the WWA treatment plant e.g. reduces % UVT (Ultraviolet Transmission).
- c) Such emulsions of both treatable and non-treatable types shall be discharged to the sewer only at a concentration and pH range that prevents coagulation and blockage at the mixing zone in the public sewer.

1C.2.7 Radioactivity

Radioactivity levels shall not exceed National Radiation Laboratory Guidelines.

1C.2.8 Colour

No waste shall have colour or colouring substance that causes the discharge to be coloured to the extent that it impairs wastewater treatment processes or compromises the treated sewage discharge consent.

1C.2.9 Liquid Pharmaceutical Waste

<u>Volume Limit</u>	<u>Active Concentration</u>
10 litres	125mg/5ml
5 litres	250mg/5ml
3 litres	Above 250mg/5ml

1C.3 Chemical Characteristics

1C.3.1 pH Value

The pH shall be between 6.0 and 10.0 at all times.

1C.3.2 Organic Strength

1C.3.2.1

The Biochemical Oxygen Demand (BOD₅) of any waste may require to be restricted where the capacity for receiving and treating BOD₅ is limited. A BOD₅ restriction may be related to mass limits.

Where there is no WWA treatment system for organic removal the BOD₅ shall not exceed 1000g/m³. For significant industry this may be reduced to 600g/m³.

NOTE – For biological process inhibiting compounds see table 5 in the Guidelines for Sewerage Systems: Acceptance of Trade Wastes (industrial waste) 12.

<p>Flow</p> <p>a) The 24 hour flow volume shall be less than 5m³.</p> <p>b) (b) The maximum instantaneous flow rate shall be less than 2.0L/s.</p>	<p>Flows larger than the guideline values should be a conditional trade waste consent. Conditional consents will be dependant on contaminant concentration/mass load.</p>
<p>Temperature</p> <p>The temperature shall not exceed 40°</p>	<p>Higher temperatures:</p> <ul style="list-style-type: none"> • cause increased damage to sewer structures • increase the potential for anaerobic conditions to form in the wastewater • promote the release of gases such as H₂S and NH₃ • can adversely affect the safety of operations and maintenance personnel • reflect poor energy efficiency. <p>It should be noted that this temperature has been reduced from 50°C to come into line with the ARMCANZ/ANZECC Guidelines for sewerage systems.</p> <p>A lower maximum temperature may be required for large volume discharges.</p>
<p>Solids</p> <p>a) Non-faecal gross solids shall have a maximum dimension which shall not exceed 15mm.</p> <p>b) The suspended solids content of any wastewater shall have a maximum concentration which shall not exceed 2000g/m³.</p> <p>c) The settleable solids content of any wastewater shall not exceed 50mL/L.</p> <p>d) The total dissolved solids concentration in any wastewater shall be subject to the approval of the WWA having regard to the volume of the waste to be discharged, and the suitability of the drainage system and the treatment plant to accept such waste.</p> <p>e) Fibrous, woven, or sheet film or any other materials which may adversely interfere with the free flow of wastewater in the drainage system or treatment plant shall not be present.</p>	<p>Gross solids can cause sewer blockages. In case of conditional consents fine screening may be appropriate.</p> <p>High suspended solids can cause sewer blockages and overload the treatment processes. Where potential for such problems is confirmed, a lower limit appropriate to the risk may be set. a lower limit may be set between 2000g/m³ and 600g/m³. The ANZECC Guidelines recommend a limit of 600g/m³.</p> <p>High total dissolved solids reduce effluent disposal options and may contribute to soil salinity. Where potential for such problems exists, a limit of 10,000g/m³ may be used as a guideline.</p>
<p>Oil and grease</p> <p>a) There shall be no free or floating layer.</p>	<p>Oils and greases can cause sewer blockages, may adversely affect the treatment process, and may impair the aesthetics of the receiving water. Where the treatment plant discharges to a sensitive receiving water, lower values should be considered.</p>

<p>b) A trade waste with mineral oil, fat or grease unavoidably emulsified, which in the opinion of the WWA is not biodegradable shall not exceed 200g/m³ as petroleum ether extractable matter when the emulsion is stable at a temperature of 15°C and when the emulsion is in contact with and diluted by a factor of 10 by raw sewage, throughout the range pH 6.0 to pH 10.0.</p> <p>c) A trade waste with oil, fat or grease unavoidably emulsified, which in the opinion of the WWA is biodegradable shall not exceed 500 g/m³ when the emulsion is stable at a temperature of 15°C and when the emulsion is in contact with, and diluted by, a factor of 10 by raw sewage throughout the range pH 4.5 to pH 10.0.</p> <p>d) Emulsified oil, fat or grease shall not exceed 100g/m³ as petroleum ether extractable matter when the emulsion is unstable at a temperature of 15°C and when the emulsion is in contact with, and diluted by, a factor of 10 by raw sewage throughout the range pH 4.5 to pH 10.0.</p>	<p>If the WWA only has screening and/or primary treatment prior to discharge, it is recommended that oil and grease be reduced to 100g/m³.</p> <p>In terms of oil and greases, biodegradable refers to the bio-availability of the oil and greases and the biochemicals thereby produced, and means the oil and grease content of the waste decreases by 90% or more when the wastewater is subjected to a simulated wastewater treatment process which matches the WWA treatment system.</p> <p>If quick break detergents are being used, it should be ensured that proper separation systems are being used by the consent holder. If not, oil will reappear in drainage systems as a free layer.</p>
---	--

<p>Solvents and other organic liquids There shall be no free layer (whether floating or settled) of solvents or organic liquids.</p>	<p>Some organic liquids are denser than water and will settle in sewers and traps.</p>
<p>Emulsions of paint, latex, adhesive, rubber, plastic or similar material</p> <p>a) Where such emulsions are not treatable, they may be discharged into the sewer subject to the total suspended solids not exceeding 1000g/m³.</p> <p>b) The WWA may require pre-treatment of such emulsions if the emulsion wastewater unreasonably interferes with the operation of the WWA treatment plant e.g. reduces % UVT (Ultraviolet Transmission).</p> <p>c) Such emulsions, of both treatable and non-treatable types, shall be</p>	<p>‘Treatable’ in relation to emulsion wastewater, means the total organic carbon content of the waste decreases by 90% or more when the wastewater is subjected to a simulated wastewater treatment process which matches the WWA treatment system.</p> <p>Emulsions vary considerably in their properties and local treatment works may need additional restrictions depending on the experience of the specific treatment plant and the quantity of emulsion to be treated.</p> <p>Emulsion may colour the WWA treatment plant influent such that % UVT is unacceptably reduced.</p>

<p>discharged to the sewer only at a concentration and pH range that prevents coagulation and blockage at the mixing zone in the public sewer.</p>	<p>Emulsions will coagulate when unstable and can sometimes cause sewer blockage. Emulsions are stable when dilute or in the correct pH range.</p>
<p>Radioactivity Radioactivity levels shall not exceed the National Radiation Laboratory Guidelines.</p>	<p>Refer National Radiation Laboratory Code of safe practice for the use of unsealed radioactive materials NRL C1.</p>
<p>Colour No waste shall have colour or colouring substance that causes the discharge to be coloured to the extent that it impairs wastewater treatment processes or compromises the final effluent discharge consent.</p>	<p>Colour may cause aesthetic impairment of receiving waters, and adversely affects lagoon treatment processes and ultra-violet disinfection. Where potential for such problems exists, a level of colour which is rendered not noticeable after 100 dilutions may be used as a guideline. Where UV disinfection is used special conditions may apply.</p>
<p>Inhibitory substances Should any characteristic of a discharge be found to inhibit the performance of the wastewater treatment process, such that the WWA is significantly at risk or prevented from achieving its environmental statutory requirements, then the WWA reserves the right to amend the corresponding consent summarily.</p>	

<p>Chemical Characteristics pH value</p> <p>pH value The pH shall be between 6.0 and 10.0 at all times.</p>	<p>In the setting of restrictions for chemical characteristics the WWA shall be mindful of the production of harmful or noxious waste streams from some tests, such as chemical oxygen demand and total kjeldahl nitrogen. The need to set such restrictions and therefore the requirement to undertake the associated testing shall be determined by the WWA.</p> <p>Extremes of pH:</p> <ul style="list-style-type: none"> • can adversely affect biological treatment processes • can adversely affect the safety of operations and/or maintenance personnel • cause corrosion of sewer structures • increase the potential for the release of toxic gases such as H₂S and HCN. <p>Relaxation of these limits to 5.5 and 11.0 is acceptable for low volume premises which discharge into a large flow. Significant industries may need to be restricted to limits between 6.0 and 9.0.</p>
<p>Organic strength</p> <p>The Biochemical Oxygen Demand (BOD₅) of any waste may require to be restricted where the capacity for receiving and treating BOD₅ is limited. A BOD₅ restriction may be related to mass limits.</p> <p>Where there is no WWA treatment system for organic removal the BOD₅ shall not exceed 1000g/m³. For significant industry this may be reduced to 600g/m³ or such other concentration as may be determined.</p>	<p>The loading on a treatment plant is affected by Biochemical Oxygen Demand (BOD₅) rather than Chemical Oxygen Demand (COD). For any particular waste type there is a fixed ratio between COD and BOD₅. For domestic wastewater it is about 2.5:1 (COD: BOD₅), but can range from 1:1 to 100:1 for trade waste. Therefore BOD₅ is important for the treatment process and charging, but because of the time taken for testing, it is often preferable to use COD for monitoring. However, the use of COD testing shall be balanced by the possible environmental effects of undertaking such tests due to the production of chromium and mercury wastes. Where a consistent relationship between BOD₅ and COD can be established the discharge may be monitored using the COD test.</p> <p>If the treatment plant BOD₅ capacity is not limited, and sulphides are unlikely to cause problems, there may be no need to limit BOD₅. High COD may increase the potential for the generation of sulphides in the wastewater.</p>

	<p>A BOD5 limit which is too stringent may require the installation of pre-treatment systems by some consent holders, imposing unnecessary costs because the most cost effective treatment method may be the WWA treatment plant.</p> <p>The concentration and mass loads of BOD5 may be set to reflect WWA treatment plant capacity; e.g. ARMCANZ/ANZECC Guidelines for sewerage systems use a concentration of 600g/m³.</p>
<p>Maximum concentrations</p> <p>Introduction</p> <p>The maximum concentrations permissible for the chemical characteristics of an acceptable discharge are set out in the following tables:</p> <ul style="list-style-type: none"> – Schedule 1F General chemical characteristics – Schedule 1G Heavy metals – Schedule 1H Organic compounds and pesticides 	<p>Where appropriate, maximum daily limits (kg/day) for mass limit controlled discharges may also be given. Where the WWA chooses not to incorporate mass limits, the appropriate column from Schedule 1F should be removed.</p> <p>Mass limits should be calculated and inserted where the WWA considers that it gives:</p> <ol style="list-style-type: none"> a) The consent holder more flexibility to adopt cleaner production techniques which may produce an effluent which allows the WWA to consider consenting to a higher level than the maximum concentration permissible, but for a lower total mass (without any adverse effects on the WWA system or discharge consents); or b) The ability to allocate a fixed quantity of a particular characteristic amongst various trade premises, e.g. a heavy metal. The quantity may be fixed by reason of a discharge consent or some other constraint. <p>The maximum concentration permissible should not exceed that achievable from the appropriate best available technology. Concentration limits should also be set to ensure the health and safety of the WWA personnel, the integrity of the collection systems and the treatment process.</p> <p>Mass limits are more complex to administer and police and should only be adopted where the WWA has sufficient expertise and resources.</p>

SCHEDULE 1D

PROHIBITED CHARACTERISTICS

1D.1 Introduction

This schedule defines prohibited trade wastes.

1D.2 Prohibited Characteristics

1D.2.1

Any discharge has prohibited characteristics if it has any solid liquid or gaseous matters or any combination or mixture of such matters which by themselves or in combination with any other matters will immediately or in the course of time:

- a) Interfere with the free flow of sewage in the sewerage system;
- b) Damage any part of the sewerage system;
- c) In any way, directly or indirectly, cause the quality of the treated sewage or residual biosolids and other solids from any sewage treatment plant in the catchment to which the waste was discharged to breach the conditions of a consent issued under the Resource Management Act, or water right, permit or other governing legislation;
- d) Prejudice the occupational health and safety risks faced by sewerage workers;
- e) After treatment be toxic to fish, animals or plant life in the receiving waters;
- f) Cause malodorous gases or substances to form which are of a nature or sufficient quantity to create a public nuisance; or
- g) Have a colour or colouring substance that causes the discharge from any sewage treatment plant to receiving waters to be coloured.

1D.2.2

A discharge has prohibited characteristics if it has any characteristic which exceeds the concentration or other limits specified in Schedule 1C unless specifically approved for that particular consent.

1D.2.3

A discharge has a prohibited characteristic if it has any amount of:

- a) Harmful solids, including dry solid wastes and materials which combine with water to form a cemented mass;
- b) Liquid, solid or gas which could be flammable or explosive in the wastes, including oil, fuel, solvents (except as allowed for in Schedule 1C), calcium carbide, and any other material which is capable of giving rise to fire or explosion hazards either spontaneously or in combination with sewage;
- c) Asbestos;
- d) The following organo-metal compounds:
 - tin (as tributyl and other organotin compounds);
- e) Any organochlorine pesticides;
- f) Genetic wastes, as follows:
 - All wastes that contain or are likely to contain material from a genetically modified organism that is not in accordance with an approval under the Hazardous Substances and New Organisms Act. The material concerned may be from premises where the genetic modification of any organism is conducted or where a genetically modified organism is processed;
- g) Any health care waste prohibited for discharge to a sewerage system by NZS 4304 or any pathological or histological wastes; or
- h) Radioactivity levels in excess of the National Radiation Laboratory Guidelines.

SCHEDULE 1E

GUIDE TO TYPES OF TRADE ACTIVITIES AND PROCESSES CONNECTED TO THE SEWERAGE SYSTEM THAT REQUIRE A TRADE WASTE CONSENT

Approved stormwater discharged to sewer
 Automotive Servicing Facilities
 Automotive/whiteware - small plant services
 Bakeries
 Beverage manufactures (including wineries)
 Building services
 Cafe/takeaway food vendor
 Car wash/valet
 Chemists/pharmaceutical waste including cytotoxic ingredients.
 Churches (with catering facilities)
 Clothing manufacture
 Concrete batching plants
 Dairy products processing
 Dentists
 Doctors surgeries
 Dry Cleaners
 Electroplaters
 Engineering Workshops
 Fellmongers
 Food premises licensed as food premises under the Health Act
 Food processors including canneries
 Footwear manufacture
 Foundries
 Fruit and vegetable processors including canneries
 Garages
 Galvanisers
 Hospitals
 Hotels and motels (with catering facilities)
 Kitchens/Dining halls
 Landfills (leachate discharge)
 Laundries
 Manufacturing of chemicals, and of chemical, petroleum, coal, rubber and plastic products
 Manufacturing of clay, glass, plaster, masonry, asbestos, and related mineral products
 Manufacturing of fabricated metal products, machinery and equipment
 Manufacturing of fertiliser
 Manufacturing of paper and paper products
 Marae
 Meat, fish, and shellfish processing
 Mechanical workshops/service stations
 Medical laboratories
 Metal finishers
 Mortuaries
 Paint and Panel Beaters
 Paint formulation/manufacture
 Photo and medical laboratories
 Photo processors
 Premises with commercial macerators
 Printers
 Research Institutes
 Residential Care Facilities
 Restaurants
 Retail butchers and fishmongers
 Service Stations
 Schools, polytechnics, universities (with laboratories)
 Scientific and other laboratories
 Spray painting facilities
 Stockyards
 Swimming pools/spa facilities
 Takeaway premises
 Tankered Wastes
 Tanneries and leather finishing
 Textile fibre and textile processing
 Timber processing
 Truck wash facilities
 Vaccine manufacturers
 Vehicle wash facilities
 Veterinary surgeries
 Waste management processors
 Wholesalers/retailers including butchers,
 green grocers and fishmongers
 Woolscourers

SCHEDULE 1F

General chemical characteristics table

Characteristic	Maximum Concentration (g /m ³)	Reason for limits
MBAS (Methylene Blue Active Substances)	500	<p>MBAS is a measure of anionic surfactants.</p> <p>High MBAS can:</p> <ul style="list-style-type: none"> adversely affect the efficiency of activated sewage sludge plants impair the aesthetics of receiving waters. <p>For treatment plants which suffer from the effects of surfactants the maximum concentration could be reduced significantly; e.g. Sydney Water utilise a level of 100g/m³.</p>
Ammonia (measured as N) <ul style="list-style-type: none"> - free ammonia - ammonium salts 	50 200	<p>High ammonia:</p> <ul style="list-style-type: none"> may adversely affect the safety of operations and maintenance personnel may significantly contribute to the nutrient load to the receiving environment
Kjeldahl nitrogen	150	High kjeldahl nitrogen may significantly contribute to the nutrient load of the receiving environment. A value of 50g/m ³ should be used as a guideline for sensitive receiving waters.
Total phosphorus (as P)	50	High phosphorus may significantly contribute to the nutrient loading of the receiving environment. A value of 10g/m ³ should be used as a guideline for sensitive receiving waters.
Sulphate (measured as SO ₄)	500 1500 (with good mixing)	<p>Sulphate:</p> <ul style="list-style-type: none"> may adversely affect sewer structures. may increase the potential for the generation of sulphides in the wastewater if the sewer is prone to become anaerobic.
Sulphite (measured as SO ₂)	15	<p>Sulphite has potential to release SO₂ gas and as SO₂) thus adversely affect the safety of operations and maintenance personnel.</p> <p>It is a strong reducing agent and removes dissolved oxygen thereby increasing the potential for anaerobic conditions to form in the wastewater.</p>

General chemical characteristics continued		
Characteristic	Maximum Concentration (g/m³)	Reason for limits
Sulphide – as H ₂ S on acidification	5	Sulphides in wastewater may: <ul style="list-style-type: none"> • cause corrosion of Sewer structures, particularly the top non-wetted part of a sewer • generate odours in sewers which could cause public nuisance • release the toxic H₂S gas which could adversely affect the safety of operations and maintenance personnel. Under some of the conditions above sulphide should be <2.0g/m ³ .
Chlorine (measured as Cl ₂) – free chlorine – hypochlorite	3 30	Chlorine: <ul style="list-style-type: none"> • can adversely affect the safety of operations and maintenance personnel • can cause corrosion of sewer structures ARMCANZ/ANZECC guidelines for sewerage systems utilise a figure of 10g/m ³ .
Dissolved aluminium	100	Aluminium compounds, particularly in the presence of calcium salts, have the potential to precipitate on a scale which may cause a sewer blockage.
Dissolved iron	100	Iron salts may precipitate and cause a sewer blockage. High concentrations of ferric iron may also present colour problems depending on local conditions.
Boron (as B)	25	Boron is not removed by conventional treatment. High concentrations in effluent may restrict irrigation applications. Final effluent use and limits should be taken into account.
Bromine (as Br ₂)	5	High concentrations of bromine may adversely affect the safety of operations & maintenance personnel.
Fluoride (as F)	30	Fluoride is not removed by conventional wastewater treatment, however pre-treatment can easily and economically reduce concentrations to below 20g/m ³ .
Cyanide – weak acid dissociable (as CN)	5	Cyanide may produce toxic atmospheres in the sewer and adversely affect the safety of operations and maintenance personnel.

SCHEDULE 1G

Heavy metals table

Metal	Maximum concentration (g/m ³)	
Antimony	10	
Arsenic	5*	
Barium	10	
Beryllium	0.005	
Cadmium	0.5*	
Chromium	5	
Cobalt	10	
Copper	10*	
Lead	10*	
Manganese	20	
Mercury	0.05	
Molybdenum	10*	
Nickel	10*	
Selenium	10	
Silver	2	
Thallium	10	
Tin	20	
Zinc	10*	

NOTE –

Heavy metals have the potential to:

- a) Impair the treatment process;*
- b) Impact on the receiving environment;*
- c) Limit the reuse of sewage sludge and effluent.*

Where any of these factors are critical it is important that local acceptance limits should be developed.

The concentration for chromium includes all valent forms of the element. Chromium (VI) is considered to be more toxic than chromium (III), and for a discharge where chromium (III) makes up a large proportion of the characteristic, higher concentration limits may be acceptable. Specialist advice should be sought.

Metals will be tested as total, not dissolved. If sludge is used as a biosolid then metal concentration/mass are important such that the biosolids guidelines are met.

For recommended mass loads of metals refer to the Guidelines for Sewerage Systems: Acceptance of Trade Wastes (industrial waste) 12.

SCHEDULE 1H

Organic compounds and pesticides table

Compound	Maximum concentration (g/m ³)	Reason for limits
Formaldehyde (as HCHO)	50	Formaldehyde in the sewer atmosphere can adversely affect the safety of operations and maintenance personnel.
Phenolic compounds (as phenols) – excluding chlorinated phenols	50	Phenols may adversely affect biological treatment processes. They may not be completely removed by conventional treatment and subsequently impact on the environment.
Chlorinated phenols	0.02	Chlorinated phenols can adversely affect biological treatment process and may impair the quality of the receiving environment.
Petroleum hydrocarbons	30	Petroleum hydrocarbons may adversely affect the safety of operations and maintenance personnel.
Halogenated aliphatic compounds	1	Because of their stability and chemical properties these compounds may: <ul style="list-style-type: none"> • adversely affect the treatment processes • impair the quality of the receiving environment • adversely affect the safety of operations and maintenance personnel.
Monocyclic aromatic hydrocarbons	5	These compounds (also known as benzene series) are relatively insoluble in water, and are normally not a problem in Trade Waste. They may be carcinogenic and may adversely affect the safety of operations maintenance personnel.
Polycyclic (or polynuclear) aromatic hydrocarbons (PAHs)	0.05	Many of these substances have been demonstrated to have an adverse effect on the health of animals. Some are also persistent and are not degraded by conventional treatment processes.
Halogenated aromatic hydrocarbons (HAHs) <ul style="list-style-type: none"> - Polychlorinated biphenyls (PCBs) - Polybrominated biphenyls (PBBs) 	0.002 each	Because of their stability, persistence and ability to bioaccumulate in animal tissue these compounds have been severely restricted by health and environmental regulators.
Pesticides (general) (includes insecticides, herbicides, fungicides and excludes organophosphate, organochlorine and any use in New Zealand pesticides not registered for use in New Zealand)	0.2 in total	Pesticides: <ul style="list-style-type: none"> • may adversely affect the treatment processes • may impair the quality of the receiving environment • may adversely affect the safety of operations and maintenance personnel.
Organophosphate pesticides	0.1
